Thank you in advance! JavaScript Libraries and Frameworks JavaScript is one of the core technologies and it is a cornerstone of today's modern Web sites and applications. However, JavaScript was introduced as a standalone language back in 1995 and it has grown up since then. Although JavaScript was always the star of the web browser, there are several JavaScript libraries and frameworks that allow you to develop rich client-side applications. JavaScript libraries allow you to take advantage of the powerful features of JavaScript and make your work easier. Besides that, JavaScript frameworks are used to create JavaScript projects. In this article, we will cover JavaScript frameworks and libraries. What are Frameworks and Libraries? Examples of JavaScript Libraries When a person thinks about JavaScript, he or she usually focuses on the script language itself. However, not all that is done with JavaScript is just script. Usually, an app or a site is made up of many of chunks. There are several libraries and frameworks that facilitate the development of applications. They provide useful functions and features and most of them are easy to learn. What Are Libraries and Frameworks? A JavaScript framework is a library or a package that provides a set of APIs. A good example is jQuery. It is an incredibly powerful JavaScript library and it's often used to create rich client-side user interfaces. You can say that JavaScript is a scripting language that is used to glue code to the document. A JavaScript framework is a library that helps you create your projects in a quicker way. To use a JavaScript framework, you don't need to learn or master JavaScript. Instead, you'll be able to write your own application in a fraction of the time

Screenshots: Zen Coding for Notepad++ Latest Version: 3.5.1 (3.5.1.0) Download From: Portableapps.com (78.4 MB) Added by: Notepad++ Portable Date Published: 2019-12-06 08:05:14 Zen Coding for Notepad++ If you're a web designer who prefers Notepad++ for writing and editing source code, you have to check out Zen Coding for Notepad++. It's a simple and practical plugin that adds extra code editing features to make your job easier and quicker. Before proceeding any further, you should know that the add-on hasn't received updates for a long time, and it doesn't look like it's still being developed. Therefore, if you're interested in a tool that gets regular updates, this one isn't for you. Enhances code editing in Notepad++ Zen Coding can be integrated with Notepad++ just like any other plugin made for this application: by copying the downloaded contents to the "Plugins" folder. Restarting Notepad++ is necessary if it was already running when making this happen. On the other hand, the app doesn't get added to the "Plugins" menu of Notepad++ like you would expect. Instead, it has its own menu with rich features. Needless to say that it only works with supported file types: HTML, XML, XSL or any other structured code format. It's based on a powerful abbreviation engine for expanding expressions into HTML, just like the case of CSS selectors. Expand or wrap with abbreviation, and more Furthermore, you can wrap code with abbreviations, balance tags, jump to the previous or next edit point, go to matching pairs, merge lines, and toggle comment mode. It's also possible to split, join or remove tags, evaluate math expressions, select the previous or next item in the list, as well as to reflect CSS values. Keyboard shortcuts can be triggered for all these commands. However, there's no settings panel that makes it possible to remap the hotkeys into anything else, nor to configure any options for that matter. All aspects considered, Zen Coding offers a helping hand to web designers who work with Notepad++. Too bad that it's an outdated software project. The Influence of Local Electrochemical Agents on the Phosphor Layer of Mg-Based Light-Emitting Diodes. We report the successful development of local phosphor deposition on Mg-based light-emitting diodes (LEDs) by using a ferricyanide-phosphate solution to replace a previously reported phosphor solution containing zinc ions as the local electrochemical agent. The performance of phosphor-coated LED devices was compared to devices processed with a phosphor solution containing zinc ions, and showed higher brightness, lower forward voltage, and narrower spread in forward voltage at the same luminance levels. The main reason for the improvement in device performance was found to be the ferricyanide ions present in the phosphor solution. Q: Why do I get the error "Object of class stdClass could not be converted to a string" when trying to use a keyed array in my query? I am trying to figure out how to query data from my MySQL database using a keyed array in my CodeIgniter code. I don't understand why I get the error "Object of class stdClass could not be converted to a string" when trying to use a keyed array to query the database. Here is the code that I have: `$listing_array = array(); $listing_array['listing_id'] = $this->uri->segment(3); $listing_array['listing_first_name`
