audi traffic sign recognition helps you recognize traffic signs with graphic information in the driver information system and/or the audi virtual cockpit. thanks to a camera, the system can recognize, in addition to regular traffic signs, also warning triangles, temporary speed restrictions and time- and weather-conditional restrictions. audi can help you get the most out of your driving experience with its blind spot monitoring (bsm) technology. bsm uses infrared sensors to help you stay in your lane and reduce potential collisions. the front and the side zones of the car are monitored: if a vehicle is detected, the system issues a visual and acoustic warning. audi assist® is a suite of intelligent assistance functions that anticipate the needs of the driver, and warns him or her about potential risks, such as changing lanes to avoid an imminent collision with the vehicle in front. audi helps you with virtually every task in the car, such as using navigation, switching functions, locking or unlocking the doors and more. on

the road, you can address important information using the wide variety of buttons and displays in the driver information system and the audi virtual cockpit. a driver is supposed to use such a camera to find out if there is someone on a road way who might hit the car in an emergency situation. when the camera is turned on, the driver is supposed to look into it so that the driver can spot a possible vehicle coming from behind. when it is cloudy and rainy out, the backup camera is turned on, and the mirror shines through raindrops so that the image looks cleaner and clearer. this view is of course also available to rear-view mirrors, but when it is cloudy, one often has to wait to see what is behind the car.

modern vehicle data are recorded for the purpose of controlling and improving the functions of the car and are also processed by the control unit's electronic control unit in

order to drive the vehicle safely. important information is used to communicate with the driver via a suitable display. the data are used to display information and warnings on the mmi monitor or in the exterior mirror display. the information includes, for example, the vehicle speed, gear selection, fuel consumption, the driver's position, the current steering angle, engine oil temperature, and many more. the steering angle is calculated and displayed to the driver on the mmi monitor and in the exterior mirror display. it shows the driver how much the steering wheel needs to be turned to rotate the wheels in a specified direction. how to use: the support and service functions of the system are operated using the large, conveniently arranged buttons. the lane change assistant makes it much easier to change lanes, and the fuel consumption assistant helps you save fuel. how to use: in the driver's seat, the button sequence may vary and may be dependent on the system version. if the white button is

held down, the car will stop if the safety system is activated. if the green button is held down, the car will be automatically braked if the safety system is activated. holding down the black button will stop the vehicle if the safety system is activated. the vehicle will be automatically braked, if the red button is held down, if the safety system is activated. the wording and function of the buttons can also depend on the vehicle model. 5ec8ef588b
